Subject: CES: Tank Trailers 407 and 408
Date: Friday, October 24, 2014 10:33:27 PM

Brian:

As you know, we have 2 tank trailers located on the site that we plan to pump out and send to Lonestar Ecology for pretreatment prior to discharge to Gulf Coast Waste Disposal Wastewater Treatment Plant. I need your recommendation on how we should accomplish the removal of the material (vacuum truck) and more importantly the cleaning of the trailers. Is it feasible to clean the trailers after pumping them into the transportation vehicle or should we transfer into empty frac tank then clean the trailers and pump this into frac tank as well and then send to Lonestar from the frac tank. What do you think?
